Over time, tree roots usually cause clogsin sewage pipes. Most sewage pipesin big cities are old and fractured, and in these cases, the use of high-pressure water can completely damage or block the pipe path. The root cutter is capable of supplying pressure and torque to easily cut all types of tree roots, whether dry or wet, in the pipes. The use of high-quality blade materials and

excellent raw materials for the root cutter components allow operations to continue even under the toughest working and environmental conditions. The size of the nozzle as well asthe different blade sizes allow this product to move smoothlyin tubes of different sizes and cut tree roots with the fastest and highest performance.
